### **ABSTRACT**

We outline a model integrating risk management and agile development. To begin with, however, we examine the agile processes from a risk management perspective to identify the risk management aspects that are absent in the agile model. We do this by using a set of fundamental risk management aspects as our comparison criteria. We continue by proposing a model for integrating the risk management and agile process models. It is created based on the identification of integration points between the two processes as excited from studies of the integration of agile and risk management processes in the industry.
